

SURGICON: Swiss innovation and smart manufacturing

SURGICON was created by experienced eyecare professionals who wanted to help ophthalmic surgeons to achieve better outcomes for their patients.

We use the latest technology to design and develop singleuse surgical instruments. As a result, ophthalmologists can feel confident our single-use surgical instruments deliver value as well as reliability every time.

Based in St Gallen, within Switzerland's new Innovation Park East, and we're an innovative company combining state-ofthe-art design and development processes with a commitment to health, safety and superior craftsmanship.

What makes SURGICON different?

We believe it's our commitment to improved safety and optimal performance. Our products are designed with the belief that precision equals safety – and that safety is too important to ignore or compromise. Each one of our single-use products has been crafted to the highest standards to achieve a consistent and exceptional performance.

We want to make SURGICON the most trusted provider of precision surgical instruments in Europe, and ultimately the world.

As our range of ophthalmic instruments continues to expand, we are reimagining what the future of optical healthcare should look like.

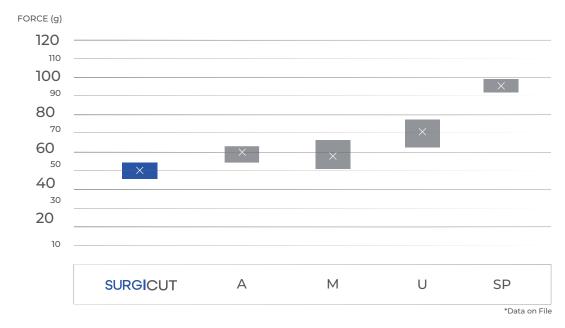

Customer Safety

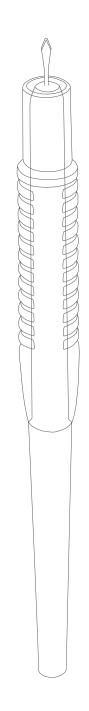

Are you in the habit of grabbing the instrument while you are watching your patient's eye through microscope?

Sharps that are extremely sharp result in high end operations. Unfortunately, this also keeps staff and surgeons at risk. The SURGICUT PROTECT series works as a shield and safeguards the well-being of your patient. We have also optimized the chemical etching process with the help of topnotch methodologies.

This results in smooth surface and double bevelled cutting edges. This results in the elimination of former coating practices which lowers down sharpness.

Penetration force various Slit Knives*

SURGICUT PROTECT: We've made our best-selling surgical blades even safer

SURGICON offers single- and doublebevel blade profiles for Slit and Clear Cornea knives. As standard, the knives are equipped with single-bevel cutting edges. These are identified by the "S" after the item number. Double-bevel shape is available for the variants from 1.8mm width and larger.

Slit-Knives

10 knives per box, 45° angled typical application: corneal and scleral incision

MVR Knives & Lances

10 knives per box typical application: paracentesis, scleral & posterior ports
